# 2 months after Go-Live: All singing, all dancing?

# Or all failing?

9

9

# 2 months after Go-Live: All singing, all dancing?

## Yes,

- Transparency: Critical data for face-to-face intervention available in +/- real time
- Personell can be deployed more precisely and efficiently (time for A&F √)
- Install of EMR enabled new collaboration with clinical pharmacists (as part of AS-Team)

### but no,

- System requires correct feeding: Data entering difficult, time consuming for clinicians and nurses
- No interface with microbiology lab yet (no bug-drug mismatch warnings etc)
- The pig is not for free...

### but,
